

Great! I'll conduct an in-depth search of film stages in Los Angeles that could accommodate your mixed-use coworking and film hub model. This will include identifying locations with cycloramas, ample room for coworking, and storage space, while also researching rental prices, utility costs, and potential real estate opportunities.

I'll also explore alternative options, such as rental houses with extra space or commercial buildings that could be converted into a stage and coworking space.

Once I gather the findings, I'll shortlist the top 10 best options that fit your model and provide insights into which might be ideal for touring.

I'll get back to you with the details soon!

Film Stages in Los Angeles for a Mixed-Use Coworking & Production Hub

Overview: Los Angeles has a wide range of film **soundstages** and studio facilities. Below we identify many major stage facilities (with cycloramas, support rooms, etc.), focusing on those that have **detailed floor plans/layouts** and extra rooms that could be repurposed for coworking or gear storage. We then compare **rental costs and utilities** (with available rates or estimates) and discuss **locations & accessibility** (Valley Glen, North Hollywood, Burbank, Atwater Village, etc.). We also explore **alternative spaces** like rental houses or warehouses that could be converted, and finally present a “**Top 10**” **list of potential locations** for in-person tours, including contact info and notes on lease stability. The goal is to find a **viable long-term home** for the film coworking hub – balancing cost, location, and creative potential.

1. Comprehensive List of LA Film Stages (with Layouts & Key Features)

Los Angeles's major studios (Warner Bros, Universal, etc.) have many stages, but those typically aren't available for independent long-term leases. Instead, we focus on **independent stages** and facilities that offer the amenities you need (cyclorama, makeup/wardrobe rooms, offices, etc.) and often provide **floor plans or spec sheets** publicly. Many of these stages publish detailed layouts or spec PDFs on their websites (e.g. Mack Sennett Studios provides floorplan downloads for its stages ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#))). Below is a list of noteworthy LA film stages that fit the criteria:

- **Atwater Stages (Minassian Productions) – Atwater Village/Glendale:** A boutique studio complex with **two certified soundstages** (Stage A and Stage B). *Stage A* is ~4,042 sq ft with a 2-wall cyc (~30'×30') and extensive support facilities (loading docks, hair/makeup room, VIP green room, full kitchen, executive restroom, projection room, production office) ([Stage A — Atwater Stages](#)) ([Stage A — Atwater Stages](#)). *Stage B* is

~3,196 sq ft and features a state-of-the-art LED volume for virtual production, a green-screen cyc, drive-in loading access, plus its own offices, kitchen, and gated entrance ([Stage B & LED Wall — Atwater Stages](#)) ([Stage B & LED Wall — Atwater Stages](#)). Both stages have **adjacent production offices and workspaces** on-site. This facility was designed for long-term shoots and even offers short or long-term rentals ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)). It provides a full turnkey setup (high power, 24/7 security, etc.) and is **directly next door to a Cinelease grip rental house** for easy gear access ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)) ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)). Floor plans and spec sheets are available on their website.

- **CML Studios – Glendale/Burbank border:** A full-service **10,000 sq ft production studio** (located at 1623 Maria St. in the Burbank/Glendale area). It offers multiple pre-lit shooting setups in one facility: a large **white cyc** (infinite white wall), a **green screen**, a **black void** space, and even a blue screen – all configurable within the open stage area ([CML Studios - Facility - Stage A](#)) ([CML Studios - Facility - Stage A](#)). CML also has all the necessary support rooms: a dedicated **makeup/wardrobe room**, a comfortable **green room**, a **kitchen**, a lofted **production office area**, a conference room, lobby, and even an upstairs client lounge ([CML Studios - Facility - Stage A](#)) ([CML Studios - Facility - Stage A](#)). Essentially, it's a warehouse divided into versatile shooting zones with an overhead lighting grid and ample power. The site is sound-insulated and comes with on-site gear rentals and staff. This kind of multi-backdrop stage with built-in offices is ideal for a hybrid coworking hub. (Floor plans may be provided on request; their website has a virtual tour of each area.)
- **Rise Motion Pictures Studio – Sun Valley (North Valley):** A **5,300 sq ft building** that contains a **3,000 sq ft soundstage** (approximately 65'x45') with a white cyc wall (convertible to green screen) ([White CYC Wall Los Angeles, CA | Rise Motion Pictures Studio](#)). The stage has a 16' lighting grid and 14' high elephant-door access. Rise comes *fully equipped* with all the expected production amenities: **two hair & makeup rooms, dressing room, green rooms, production office, kitchen, and restrooms** – all included with a rental ([Main Stage White Cyc, Los Angeles, CA | Production | Peerspace](#)). The cyc is pre-lit with a modern LED/tungsten mix, and 600 A of power is available (with distro boxes) ([Main Stage White Cyc, Los Angeles, CA | Production | Peerspace](#)). The facility effectively "is more than just an empty warehouse," as they advertise, since it has offices and support rooms attached ([White CYC Wall Los Angeles, CA | Rise Motion Pictures Studio](#)). (They provide a PDF floorplan on their site, showing the stage and adjoining rooms layout.) This stage was established in 2016 and is designed for music videos, commercials, etc. ([Studio - Rise Motion Picture Studio - Event Venue Rental - Tagvenue.com](#)), so it's well-suited to an independent creator hub.
- **Sun Valley "Stage THIS" Facility – Sun Valley:** Another Sun Valley stage option, listed via **Stage THIS LA**. This is a **7,500 sq ft standalone studio** comprising a **5,000 sq ft soundstage** (with a three-wall cyclorama) and ~2,500 sq ft of support space ([Sun Valley](#)

[| Stage THIS](#)) ([Sun Valley | Stage THIS](#)). The cyc is quite large (approx 70'x64'x35' along three walls) and the stage height is 20' to the lighting grid ([Sun Valley | Stage THIS](#)) ([Sun Valley | Stage THIS](#)). It's a **fully soundproofed stage** with **1,200 A 3-phase power** (400 A per leg) and is pre-lit by a set of high-output LED space lights ([Sun Valley | Stage THIS](#)). Support rooms include **4 bathrooms**, a dedicated hair/makeup suite, a main green room plus a VIP green room with private bathroom & shower ([Sun Valley | Stage THIS](#)). There's also a production office area and on-site parking for 40+ cars/trucks ([Sun Valley | Stage THIS](#)). This facility is used for a lot of music videos and commercials (Stage THIS lists many shot here) and they provide detailed spec sheets and floor plans ([Sun Valley | Stage THIS](#)) ([Sun Valley | Stage THIS](#)). It has ample extra rooms that could easily serve as coworking offices or gear storage. (Stage THIS also reps a few other locations like a Hill St. stage and an Echo Park XR stage ([Sun Valley | Stage THIS](#)) ([Sun Valley | Stage THIS](#)), but the Sun Valley one is the largest and most relevant.)

- **A Very Good Space – Van Nuys (Central Valley):** A newly built **12,500 sq ft** soundstage facility in Van Nuys. AVGS markets itself as “LA’s most versatile stage” ([A Very Good Space | Los Angeles Soundstage Rental](#)) – it’s a **pre-lit soundstage** outfitted with the latest tech for filmmaking and virtual production. The stage’s lighting system is fully networked and includes an **RGBW lighting volume**, a giant 12'x20' softbox, moving lights, and even a 20'x10' LED video wall for virtual sets ([A Very Good Space | Los Angeles Soundstage Rental](#)) ([A Very Good Space | Los Angeles Soundstage Rental](#)). The space can instantly switch between **white cyc**, **black void**, **green screen**, or an **LED volume** configuration ([A Very Good Space | Los Angeles Soundstage Rental](#)) ([A Very Good Space | Los Angeles Soundstage Rental](#)) – giving huge creative flexibility. It also has **high-speed fiber internet** and a 4K live-stream setup in-house ([A Very Good Space | Los Angeles Soundstage Rental](#)). In terms of layout, the 12.5k sq ft likely includes the main stage area (~8,500 sf of open shooting space, per some listings ([A VERY GOOD SPACE - Van Nuys - Creative Handbook](#))) plus support rooms/offices. They advertise that it's optimized for efficiency and that stage layout info is available on request ([A Very Good Space | Los Angeles Soundstage Rental](#)). This is a top-of-the-line stage that certainly has **additional rooms (lounge, offices, etc.)** in the floorplan, given it's designed for full productions. (Contact info and a stage diagram are provided on their site.) The advanced infrastructure here could attract high-end clients, and it could double as a tech-forward coworking hub when not in use for shoots.
- **Affordable Sound Stages – North Hollywood Lofts:** A cluster of smaller studios in NoHo managed by Vic Anthony, offering **budget-friendly, fully packaged stages**. Notably, **NoHo Loft #2** is a **5,800 sq ft soundproof studio** with two 40'x40' shooting areas (essentially two cyclorama stages or set areas) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). It has **400 A cam-lock power distribution**, a stage manager on-site, and a gated parking lot for ~30 cars ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). All essential amenities are present: **hair/makeup room with**

wardrobe racks, two private bathrooms (one with shower), a **green room**, a **“Crafty’s Kitchen”** (craft service kitchen), a client lounge, and a production office area ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). They even include office equipment (Wi-Fi, phone, printer/scanner, etc.) and basic furnishings – truly a turnkey setup ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). The best part is **all utilities (power, A/C)** are *included* in the rental rate, which they call “All In Rates” ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). The standard rate is **\$1,995 per shoot day** (12 hours) and \$995 for prep/strike days ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) – a flat fee that covers everything. This company explicitly welcomes **daily, weekly, monthly, and long-term rentals** ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)), meaning they are open to a tenant using the space as a home base. (Floor plan “stage schematic” is available on their site ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)).) In addition to Loft #2, they have other stages: e.g. a **Green Screen studio** and **Loft #3** (1500 sf office loft for production use ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#))). An arrangement could be made to use a **stage+loft combo** for a coworking hub – one stage for shooting and an adjacent dressed loft as coworking/gear space. The Affordable Stages are not huge, but they come with many **production office features** built-in, and are relatively low-cost and flexible – potentially a good fit if the hub prioritizes affordability and doesn’t need a giant stage.

- **Mack Sennett Studios – Silver Lake/East Hollywood:** A historic independent studio with two stages and extensive support amenities. **Stage 1** is a **5,300 sq ft** stage featuring a large cyc (approx 53’W × 34’L × 21’H) ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)), **full catwalk** over the stage, and **1200 A** power distributed in 6×100 A circuits ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)). It has an elephant door for vehicle access and 95’ of shooting depth ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)). Stage 1 comes with **three green rooms** (dressing rooms) and other support space, and the facility has additional production offices on-site (they have a separate “Mabel’s” space often used for events/coworking). **Stage 2** is smaller – about 2,000 sq ft with a 25’W × 30’L cyc (25’ tall) ([Stage 2 at Mack Sennett Studios | Rental Studio Space in Los Angeles](#)) – and it boasts a 35’ ceiling and plenty of natural light or blackout capability for still shoots ([Stage 2 at Mack Sennett Studios | Rental Studio Space in Los Angeles](#)) ([Stage 2 at Mack Sennett Studios | Rental Studio Space in Los Angeles](#)). Mack Sennett offers **vanity makeup rooms, wardrobe rooms, a kitchen, and office/lounge areas** for productions ([Mack Sennett Studios: Sound Stages Los Angeles | LA Sound Stage ...](#)) ([Contact Us - Mack Sennett Studios](#)). As a bonus, this venue doubles as an event space for Hollywood parties and screenings, so it’s used to accommodating people working and socializing on-site. **Floorplans** for both stages are downloadable ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)). This facility is centrally located (Bates Ave in Silver Lake) which could appeal to Eastside creatives. However,

note that Mack Sennett's business model includes events and short-term shoots, so while the space certainly fits the hub concept (it even has a hip coworking vibe), any long-term lease would have to align with their schedule. Still, it's a **well-equipped creative compound** worth considering.

- **Line 204 Studios – Pacoima (North Valley):** Line 204 is a major stage rental company, and they have a brand-new studio campus in Pacoima. One of their stages, “**North Stage 1,**” is a **6,000 sq ft soundstage** (about 100'×60', with 22' to the grid) ([North 1 - Line 204 | 204 Events](#)). It has a two-wall cyc (70'×50') and extremely robust infrastructure: up to **2,400 A of power**, heavy-duty HVAC (70-ton cooling), drive-in loading doors, and full soundproofing ([North 1 - Line 204 | 204 Events](#)) ([North 1 - Line 204 | 204 Events](#)). In addition to the stage floor, Line 204's complex offers **11,000+ sq ft of production offices/work space** and 1,800 sq ft of set storage/build space adjacent (these figures are for their whole facility, which includes multiple stages) ([Sound Stage for rent in North Hollywood, CA](#)). Specifically at Pacoima, they mention conference rooms and private offices available as well ([North 1 - Line 204 | 204 Events](#)). All the usual support rooms (green rooms, dressing rooms, hair/makeup, etc.) are present in their stage builds ([North 1 - Line 204 | 204 Events](#)). Essentially, this is a **state-of-the-art studio lot** in the North Valley. It's primarily aimed at professional productions, but they have *so much space* that one stage with offices could potentially be leased longer-term. (It's worth noting Line 204 is constructing a total of 10 stages on a 10-acre site ([About Us - Line 204 | 204 Events](#)), so there may be **availability and flexibility** as they ramp up.) This would be a higher-budget option, but it offers *brand-new facilities* and the clout of an established studio. It's also very secure (purpose-built stages with gated lots). If they're open to a steady tenant on one stage, it could provide great long-term security for the hub.
- **L.A. Castle Studios – Burbank:** A unique independent studio known for its **virtual production and standing sets**. LA Castle is essentially an all-in-one production hub already – they provide a soundstage with pre-built **talk show sets, news desks, game show sets**, as well as Unreal Engine virtual environments ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). The Burbank facility has a stylish modern interior and claims to offer “every piece of gear you'll need – no hassles or hidden costs” ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). In practice, they have a large green-screen stage space where they can composite any background, plus a variety of **fully connected rooms (control rooms, dressing rooms, etc.)** for productions ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). They also have on-site **production offices** for clients and an edit suite. Essentially, LA Castle Studios is already doing a **hybrid of production + office space**: networks come in to shoot seasons of shows there, and the hosts/crew use the offices and lounges on-site ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). It's a turnkey facility with **top-tier equipment and tech support** included. For your purposes, LA Castle could be an interesting model to study (they “merge cutting-edge technology, turnkey production, and limitless creative potential, all under one roof” ([L.A. & ABQ Castle Studios | Patented Virtual Production](#))).

However, since they have their own production business, they might not lease out the space for others to run a coworking hub – but a partnership could be explored. At the very least, touring this studio would spark ideas on integrating coworking with a high-tech stage.

(Other notable mentions: **Quixote Studios** – **Griffith Park** has a campus with 4 stages and 16,000 sf of production offices ([Griffith Park Studios - Quixote](#)) in Atwater Village, and **Sunset Glenoaks Studios** is a brand-new 7-stage complex in Sun Valley (North Valley) with adjacent offices ([Sound Stages | Sunset Glenoaks Studios](#)) ([Sound Stages | Sunset Glenoaks Studios](#)). These are larger, more corporate facilities; they have top amenities but typically cater to TV/film productions rather than creative coworking. Still, they demonstrate the **trend of combining stages with office space** in LA's studio design.)

2. Stage Rent & Utility Costs

Rental Prices: Stage rental rates in LA vary widely by size, location, and included amenities. Most of the independent stages above do **daily or hourly rentals** for productions. Here's a range of sample rates (where publicly available):

- **Pollution Studios (Boyle Heights):** ~\$300/hour (6-hour minimum) for the main stage ([Main Stage White Cyc. Los Angeles. CA | Production | Peerspace](#)). That equates to about **\$1,800 minimum per booking**, with full-day shoots often around \$3,000–\$3,600. (For example, Pollution is listed at \$300/hr on Peerspace, 6 hr min ([Main Stage White Cyc. Los Angeles. CA | Production | Peerspace](#)), and other sites note a ~\$1,600–\$1,750 minimum spend ([Pollution Studios | Los Angeles Venue | All Events - PartySlate](#)) ([Main Stage - Pollution Studios - Event Venue Rental - Tagvenue.com](#)).) This includes the 2,925 sf stage and all its amenities, but **A/C is an extra charge** ([Main Stage White Cyc. Los Angeles. CA | Production | Peerspace](#)).
- **Affordable NoHo Stages: \$1,995 per shoot day** (all-inclusive) for a ~5,800 sf stage with power & HVAC included ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). Prep/off days are \$995. This flat rate covers the stage, support rooms, parking, etc. – an extremely cost-effective package.
- **Rise Motion Pictures:** Rates aren't published on their site, but a Tagvenue listing indicated **around \$1,500–\$2,000/day** range (they mention \$1,600 minimum spend for events) ([Studio - Rise Motion Picture Studio - Event Venue Rental - Tagvenue.com](#)). It likely falls in line with similar stages – perhaps ~\$2,000/day including basic gear. **All amenities are included** in their price ([Studio - Rise Motion Picture Studio - Event Venue Rental - Tagvenue.com](#)) (and they offer to rent any extra gear you need).

- **A Very Good Space:** Listed at **\$325/hour** on Peerspace ([A Very Good Space: 12500 sq. ft. Professional Soundstage for ...](#)) (with a 5-hour min). That's roughly \$3,000–\$4,000 for a full day. This premium reflects the high-end lighting and LED volume included.
- **Mack Sennett Stage 1:** Not publicly priced, but anecdotal rates are in the **\$3,000–\$5,000/day** range (given its size and Hollywood location). Stage 2 (small) might be ~\$1k–\$1.5k/day. They typically quote per project.
- **Atwater Stages (Minassian):** Also by quote. Considering the size (two stages + offices), expect perhaps **\$3,000+ per day** for one stage, or weekly packages for longer bookings. They do advertise willingness for **long-term “shoot long term if needed”** arrangements ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)), which implies negotiable pricing for extended rentals.
- **Line 204 Pacoima:** Line 204 rents stages on 12-hour days with flat rates ([About Us - Line 204 | 204 Events](#)). Their Hollywood stage (~6,000 sf) was about \$4,000/day, so likely similar or a bit less in Pacoima (perhaps **\$3,000–\$4,500/day** range). Because it's new, they might offer introductory deals or bundle office space in. Again, long-term deals would be case-by-case.

Monthly Lease Estimates: If considering *leasing an entire facility long-term* (instead of daily rentals), we can estimate using commercial real estate comps. Industrial spaces in the Valley typically lease for about **\$1.50–\$3.00 per sq ft per month**, depending on condition and location. For example, a **6,000 sq ft warehouse in North Hollywood** was recently listed at **\$1.75/sf per month** ([Warehouses for Lease in North Hollywood, CA - Crexi](#)) – that's roughly **\$10,500 per month** in base rent. A fully built-out stage with offices might be on the higher end due to improvements (or handled as a gross rent if turnkey). As a data point, a 9,794 sf soundstage property in Hollywood (800 N Seward) was on sale for \$6.6–\$7.5 million ([Hollywood Soundstage, 800 N Seward St | JLL Properties - US](#)) ([PowerPoint Presentation](#)). The implied lease value of that (if one were to lease instead of buy) would likely be in the **tens of thousands per month** (e.g. ~\$50k/month range, given the sale price) – Hollywood is pricy. In the Valley, however, purchasing or leasing is cheaper. A rough estimate for a **5,000–10,000 sf stage facility in NoHo/Burbank** might be on the order of **\$10k–\$20k per month** in rent (before utilities), if you secure a long-term lease directly with a landlord.

Utilities and Other Costs: Operating a stage can incur high utility costs, especially electricity for lighting and HVAC. Many short-term stage rentals *include* a certain power usage or A/C in their price (as noted, Affordable stages include power/AC ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)), whereas Pollution charges extra for extensive A/C use ([Main Stage White Cyc. Los Angeles, CA | Production | Peerspace](#))). If you lease a space independently, you'll be paying utilities yourself: **electric bills** for a stage can easily be a few thousand dollars per month if the stage is heavily used (high-output lights and large AC units draw a lot of power). Efficient LED lighting (like at A Very Good Space) can mitigate this,

whereas older tungsten lighting would spike electricity usage. Water usage is minimal (just restrooms, etc.), and **insurance** and maintenance are additional considerations.

Cost-Effectiveness vs. Pollution Studios: Pollution Studios currently offers a comprehensive facility but at a rental rate (~\$300/hr) that adds up quickly for frequent use. If the coworking hub needs regular access to a stage (say several days every week), renting Pollution (or similar studios) on a daily basis could become *more expensive* than having your own leased space. For instance, **8 shoot days at Pollution** might cost around \$24k+ *per month* (8×\$3k each), not including any office rental. In contrast, a comparable stage in the Valley might be leased for, say, \$12k/mo plus ~\$3k in utilities – potentially cutting monthly costs significantly *and* giving 24/7 access. Even using a turnkey rental like Affordable NoHo could save money: at \$1,995/day, those same 8 days are ~\$16k, and if you negotiated a flat monthly deal it could be lower.

So, **moving the hub to a dedicated space can be very cost-effective** if the utilization is high. The break-even point depends on usage: if you only need a stage 1–2 times a month, staying with ad-hoc rentals is cheaper; but if you need it multiple times a week (plus permanent offices), a long-term lease elsewhere will likely **save money and allow sub-rental** to others on off days (extra revenue). The comparison tilts further in favor of an independent space when you consider that coworking memberships and subleases could offset the rent. The key is to find a reasonably priced facility or landlord willing to lock in a fair monthly rate.

(Utilities Tip: If negotiating a lease, try to get **existing stage infrastructure** included. For example, a building that already has a cyclorama, lighting grid, and high-capacity electrical service saves you six figures in build-out costs. All the stages listed above come with these features built-in, which is why partnering with an existing stage might be attractive. If converting a raw warehouse, budget for the installation of a cyc, soundproofing, AC, etc.)

3. Location & Accessibility Considerations

Primary target areas are *Valley Glen, North Hollywood, and Burbank*, with secondary consideration for *Atwater Village* or other central areas that bridge West and East LA. Here's how these locations stack up:

- **Valley Glen/North Hollywood/Burbank – “The Valley Hub”:** This area is in the San Fernando Valley, which is a major hub for film production resources. It offers **convenient freeway access** (the 170, 134, 101, and I-5 intersect around NoHo/Burbank) for crew driving in. Public transit is decent in NoHo – the Metro Red Line terminates at North Hollywood Station, connecting to Hollywood and Downtown. **Industry infrastructure is abundant:** Burbank and NoHo are home to numerous rental houses, prop houses, and vendors. (For instance, within a few miles you have *F22 Studios* – a Burbank rental house with a small studio ([Home - F22 Studios | Burbank Camera Rentals](#)), Wooden Nickel Lighting, Filmtools, Mole-Richardson, Astek, and many more.) Being in the Valley means you're close to crew and talent who live on that side of town – it's a convenient commute for many in the industry. **North Hollywood (NoHo Arts District)** in particular

has a burgeoning creative scene with theaters, acting studios, and some smaller soundstages catering to independents ([Small Sound Stages for Rent in Los Angeles, CA - Tagvenue](#)). Burbank of course hosts the big studios (WB, Disney) and has a professional cachet. From a client perspective, a Valley location might be perceived as more accessible than going into Downtown or the Westside, especially for those already working at studios or rental houses nearby. Valley Glen is essentially a neighborhood adjacent to NoHo/Van Nuys – it's largely residential with some light industrial zones (which is where a converted warehouse could exist). It's very central within the Valley. Proximity to services: *Rental houses*: Just north in Pacoima/Sun Valley is Cinelease (grip gear) and Line 204's depot; in Burbank/NoHo you have Panavision, AbelCine, Quixote Expendables, etc. In fact, Stage B at Atwater (Minassian) specifically notes that **grip and electric gear can be rented next door from Cinelease** ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)) – a great example of local synergy. Overall, the Valley locations offer **plentiful parking**, easier trucking logistics (wider streets, less congestion), and lots of nearby production professionals. The trade-off is it might be a bit of a drive for Westsiders (e.g. someone coming from Santa Monica), but being near the 101/134 helps.

- **Atwater Village/Glendale – “Central LA” option**: Atwater Village is just east of Hollywood, near the LA River, sandwiched between Glendale and Silver Lake. It's actually a sweet spot for accessibility – you can reach it easily from both West LA (via the 5 or surface streets through Hollywood) *and* from Eastside/Pasadena via the 134/2 freeways. It's roughly equidistant from the Westside and the deep Valley. Choosing a location here (like the Atwater Stages on Exchange St.) might make the hub **equally appealing to filmmakers living on either side of town**. Glendale specifically is a well-developed city with lots of amenities (restaurants, Home Depot for set supplies, etc.), and it's very safe/clean. Public transit exists (Glendale has a Metrolink rail and buses), but most will drive. **Traffic-wise**, someone coming from West LA (Culver City, etc.) to Atwater avoids downtown congestion by taking the 10->5 freeways or surface streets; someone from Burbank or NoHo just comes over a couple of miles. It's a nice middle-ground. Additionally, Glendale/Atwater has some industry neighbors: nearby are Disney's Grand Central campus, DreamWorks Animation, and some post-production houses. The **Atwater Stages facility** itself highlights that it's *20 minutes from Hollywood* ([Studio - Rise Motion Picture Studio - Event Venue Rental - Tagvenue.com](#)). The area is also near rental houses – e.g. *ESS** (Equipment Supply Service) and *Angenieux* have offices in Glendale, and as noted, *Cinelease* is next door to Atwater Stage B ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)). Being in Atwater Village also means the hub could attract clients who don't want to go deep into the Valley; it has a slightly more “hip” urban vibe (next to trendy cafes, etc.), similar to the feel of Pollution Studios' current location in Boyle Heights. Finally, Atwater/Glendale give good access to crew from East LA, Echo Park, Downtown, etc. – so it **broadens the talent pool** who could use the coworking space (compared to a far-north Valley location).

- **Accessibility from West/East LA:** One reason Atwater/Glendale was considered is to balance Westside and Eastside. If the hub were in Burbank, those on the Westside (Santa Monica, Venice) might balk at the 1+ hour drive in traffic. Conversely, if it's far east or downtown, folks in Beverly Hills or Sherman Oaks might not come. Glendale is central. Another compromise option could be something like Hollywood or Hollywood adjacent (but prices skyrocket there). Given the priorities, staying in the **studio zone radius** (the 30-mile zone center) is important, and all these locations are well within that. Also, think about **transportation for coworkers:** The Valley locations have ample parking (e.g. Affordable NoHo has a 35-car lot ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)), Atwater has lots and street parking ([Sun Valley | Stage THIS](#))). If someone doesn't drive, the NoHo location could be reached by Metro + a short rideshare (or a Burbank bus). Glendale has less transit but plenty of rideshare availability. **Safety and comfort:** Burbank and Glendale are very safe and business-friendly (Glendale in particular is known for being film-permit friendly, etc.). North Hollywood is more mixed but the arts district is up-and-coming. Valley Glen is mostly residential, so a warehouse there might be very low-profile and secure (but you'd want to be near a main road for visibility).

In summary, **all these preferred areas are viable** in terms of accessibility. North Hollywood/Burbank offer the advantage of being in the heart of the film supply chain (and likely slightly cheaper rents than Glendale). Atwater/Glendale offers a central meeting point for creatives from all over LA. It may come down to the specific property opportunity – e.g., if a perfect stage in Valley Glen appears, that could outweigh a merely decent space in Atwater, and vice versa.

(Note: Also consider where your current membership base or collaborators are coming from. If a lot are in the Valley already, staying there makes sense. If many are Eastsiders, Glendale might draw more. The **Studio Zone** radius shouldn't be an issue until you go past 30 miles – all these are within ~15 miles of the zone center at Beverly & La Cienega.)

4. Alternative Spaces and Conversion Opportunities

Beyond traditional soundstages, you should consider **non-traditional venues** that could be adapted into a stage+coworking hub:

- **Rental Houses with Spare Space:** Sometimes camera or lighting rental companies have large facilities with unused areas (e.g. a warehouse portion for storage that isn't always full). If a rental house is looking for extra revenue, they might carve out a section to sublet. For example, F22 Studios in Burbank operates an "all-in-one" camera rental and small studio under one roof ([Home - F22 Studios | Burbank Camera Rentals](#)). You could approach similar businesses – *camera rental houses, grip/electric rental shops, or even post-production facilities* – to see if they have a stage or large prep area that sits idle. They might be open to a partnership where you build a cyc and host coworkers, which in turn could drive business to their rental side. Some targets to think about:

AbelCine – they have a big facility in Burbank with a training room (formerly they had a small stage when they were near downtown). **Wooden Nickel Lighting** in North Hollywood – they have a warehouse and sometimes rent space for shoots. **Quasar Science** (lighting manufacturer) used to have a demo space. Even something like **Birns & Sawyer** (historic camera shop in NoHo) – they had a small stage for product shoots; not sure if it's available now but they have an address in NoHo ([Find a Dealer - The Tiffen Company](#)). In the **grip/electric world**, companies like Cinelease and ISS (Independent Studio Services) occasionally sub-rent their backlots for shoots. If you find a rental house that's amenable, the advantage is you both benefit – you get space and built-in equipment access, and they get rental income and a community onsite. This model is basically what Pollution Studios itself does (they combined a studio with a camera/lighting rental house ([Main Stage White Cyc, Los Angeles, CA | Production | Peerspace](#))).

- **Manufacturer or Vendor Facilities:** Similar to rental houses, film gear manufacturers sometimes have large warehouses. The user brief mentioned **Tiffen in North Hollywood** as an example – Tiffen (which makes Steadicam, filters, etc.) indeed has a big building in the Valley for their operations. While that's primarily offices and manufacturing, it underscores that **industrial buildings in that area can be multi-purpose**. One could imagine partnering with a company like Tiffen, or an ARRI, etc., where you lease a portion of their building to run a coworking creative space. (To be clear, we have no indication Tiffen is actually leasing space, but it's the kind of thinking: e.g., “**half office, half stage**” under one roof.) Another example: some **post-production or VFX companies** have soundstages for their virtual production work – e.g. Magnopus in downtown, or Technicolor's old stage. While those might not lease to external parties, if you have contacts, it's worth probing.
- **Commercial Warehouses/Warehouse Offices:** The Valley is full of generic warehouses and light industrial units. Converting one into a stage + coworking hub is entirely feasible (that's essentially how many independent stages started). You would be looking for something with **high ceilings** (18'+ ideally), an open floor plan, and some existing office build-out or mezzanines. A roll-up loading door (“elephant door”) is a plus for getting equipment and set pieces in. For example, **8115 Lankershim Blvd** (North Hollywood) is an industrial listing of ~6,000 sf with a ~\$1.75/sf rate ([Warehouses for Lease in North Hollywood, CA - Crexi](#)) – that kind of space could be emptied out to create a stage, and any attached offices could serve as coworking rooms. You'd need to install proper soundproofing and a cyclorama wall, and possibly beef up the power (many warehouses have 200–400 A service; you might upgrade to 600+ A for a serious stage). **Air conditioning** is another investment – a lot of warehouses have minimal HVAC, so you'd budget for a good climate control if you want a comfortable coworking environment in summer. The upside of a conversion is **complete control**: you can lay it out exactly to your vision (maybe even build edit bays, a podcast studio, etc.), and you negotiate a long lease (3-5 years or more) for stability. The cost can be lower long-term – industrial rents in Valley Glen/NoHo are comparatively low, and you're building equity in

the improvements (and potentially negotiating rent abatements for doing the tenant improvements). The example of **Tiffen's facility** shows that industrial buildings can handle specialized use – they likely retrofitted for their needs, as would you. One caution is zoning: make sure any warehouse is zoned for “studio” or “soundstage” use (most industrial zones in LA allow film production, but it's worth checking or getting film permit office guidance). Also, **noise** – is it near train tracks, airports, or busy roads? Some Valley warehouses might have noise issues (e.g., near Van Nuys Airport flight path or a railroad). You'd want one in a quiet area or plan to soundproof extensively.

- **Hybrid Coworking Offices with Production Space:** Another outside-the-box approach is to look at an existing **coworking facility that has some large open area** – for instance, some coworking spaces in LA have event spaces or big studios inside them. Examples include Phase Two in Culver City (geared to creators, with a small stage) or CTRL Collective (had a VR lab). While those specific ones might not have cycloramas, the idea is to maybe partner with a coworking brand or find a vacancy in a creative campus. **Hollywood Production Center (HPC)** is actually a company that blends offices with production support – at least one of their Glendale locations was a former soundstage facility (HPC Lexington in Glendale has hosted productions) ([121 W. Lexington Dr. Glendale, CA - Hollywood Production Center](#)). They advertise offering sound stage rentals at their locations ([Sound Stage Rental near Sunset Hills, CA](#)). HPC essentially *is* your concept (executive suites + optional stage), but they cater to studio clients. If HPC has an underutilized small stage, maybe you could rent that and a block of offices. However, HPC's pricing might be steep since they target short-term office rentals (their fully furnished offices come at a premium). Still, it's worth noting that model exists. Another example: **LA Center Studios** downtown offers office space for rent alongside its stages ([Los Angeles Center Studios](#)) (though it's downtown, not Valley).
- **Community Spaces / Underused Theaters:** Sometimes old theaters or TV studios come up for rent. For instance, local public access studios or college soundstages (like LAVC in Valley Glen has a stage for its students – though not for commercial use, but an interesting thought if they ever share space). An old TV studio facility might have multiple offices and a stage – basically what you'd build yourself. Keep an eye out on listings for terms like “studio compound” or “soundstage for lease” (they are rare, but pop up occasionally – e.g., the 800 Seward Hollywood stage was an example for sale).

In summary, **alternative routes** could either save money or create strategic partnerships. If you go the warehouse conversion route, you gain long-term **security** (you become the master tenant with control to build your community). If you collaborate with an existing rental house or facility, you might save on upfront costs and piggyback on their infrastructure. The key is finding a landlord or partner **enthusiastic about your vision** – someone who sees the benefit of a stable creative hub in their space. The good news is some listings explicitly welcome long-term production use (e.g. Affordable NoHo's ad mentions monthly and long-term productions ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#))). Landlords in these areas are used to film industry tenants, so they know things like soundproofing and set construction

come with the territory. It would be wise to **speak with a commercial real estate broker** familiar with studio properties; they might know of “off-market” warehouses that already have stage elements (for instance, brokers who dealt with Alliance or CenterStaging or other studios closing).

Lastly, consider **buying property** if the capital is available or through investors. Owning a building (like the \$6.6M Hollywood stage property) is a big step, but it guarantees long-term home and asset growth – perhaps a future goal once the hub proves itself.

5. Top 10 Potential Spaces for Tours

Based on the research, here is a **shortlist of 10 promising locations** that fit the vision of a mixed-use film production coworking hub. These selections prioritize existing stages with support rooms (and cooperative owners), as well as a couple of wildcard options. For each, we note key features and contact info for scheduling a tour. These represent the best candidates for a **long-term, secure home** where a landlord might be supportive of your business model:

1. Atwater Stages (Minassian Productions) – Atwater Village, Glendale – *Description:* Two soundstages with extensive attached office space. Stage A (~4,000 sf) has a 2-wall cyc, 3 bathrooms, kitchen, dressing/makeup rooms, green room, projection room, and two private offices ([Stage A — Atwater Stages](#)) ([Stage A — Atwater Stages](#)). Stage B (~3,200 sf) features an LED volume wall and also includes offices, kitchen, and 4 bathrooms ([Stage B & LED Wall — Atwater Stages](#)) ([Stage B & LED Wall — Atwater Stages](#)). Both stages have gated parking and 24/7 security. This facility can support both production and coworking simultaneously given its multiple rooms. The management has indicated openness to long-term rentals ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)). *Location Benefits:* Central location (5301 Exchange St.) accessible from Hollywood and the Valley, and right next to Cinelease for equipment needs ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)). *Contact:* 5301 Exchange St, Los Angeles, CA 90039. Phone: (818) 843-6511 ([Minassian Productions, Inc. - Specializing in Second Unit and Insert Photography](#)) (Minassian Productions). You can reach out to owner Vahik Minassian to schedule a tour – they are used to showing the facility to production clients.

2. CML Studios – Burbank/Glendale – *Description:* A 10,000 sq ft versatile studio with multiple backdrops (white cyc, green screen, black void) and full suite of support rooms. It’s essentially a turn-key production stage plus offices: includes a makeup/wardrobe room, green room, kitchen, a second-story production loft and conference room, and even a lobby/reception area for clients ([CML Studios - Facility - Stage A](#)) ([CML Studios - Facility - Stage A](#)). The stage space can be reconfigured easily between different looks, which is great for hosting varied shoots for members. It’s fully air-conditioned and sound-insulated. *Location Benefits:* In the media district area on the border of Burbank/Glendale (address below). It has on-site parking (private lot) ([CML Studios - Facility - Stage A](#)) and is close to Burbank’s many production services. This studio is relatively new and likely interested in partnerships. *Contact:* 1623 Maria St., Burbank, CA 91504. Phone: (818) 396-4121; Email: info@cmlstudios.net ([CML Studios - Facility -](#)

[Stage A](#)). (Ask for Carlos or a studio manager for tours – they often accommodate walkthroughs.)

3. Rise Motion Pictures Studio – Sun Valley – *Description:* A 5,300 sq ft facility with a 3,000 sq ft soundstage. It comes *fully equipped* – white cyc (convertible to green screen) with a 16' lighting grid, pre-lit with LEDs ([White CYC Wall Los Angeles, CA | Rise Motion Pictures Studio](#)), plus **two makeup rooms, two green rooms, a kitchen, offices, and restrooms** built in ([Main Stage White Cyc, Los Angeles, CA | Production | Peerspace](#)). Essentially, it's a compact "studio lot in a box." The stage has 600 A power and an elephant door (vehicle access) ([Main Stage White Cyc, Los Angeles, CA | Production | Peerspace](#)). This space is actively rented to indie productions and is well-maintained (est. 2016). They also offer gear rentals on-site or can source gear for you ([Studio - Rise Motion Picture Studio - Event Venue Rental - Tagvenue.com](#)). *Location Benefits:* North Sun Valley, near the 5 freeway – about 10 minutes north of NoHo. It's somewhat tucked in an industrial area, which is good for noise. Being slightly farther north, it might have slightly lower rates and a landlord more open to negotiation. *Contact:* **11678 Pendleton St, Sun Valley, CA 91352**. Phone: **(916) 224-2242**; Email: risemotionpicturesstudio@gmail.com ([Rise Motion Pictures Studio | Studio.Guide](#)). (The owner's name is likely Brandon or similar – they typically respond quickly via the contact form on their website. A tour can be arranged during weekdays.)

4. Sun Valley Stage (via Stage THIS) – Sun Valley – *Description:* A larger independent stage represented by Stage THIS. It's a **7,500 sq ft facility** with a **5,000 sq ft pre-lit soundstage** (3-wall hard cyclorama) and ~2,500 sq ft of support space ([Sun Valley | Stage THIS](#)) ([Sun Valley | Stage THIS](#)). Key features include **12×12 ft elephant loading doors**, a 20' clear height to the lighting grid, and **1,200 A 3-phase power** – capable of handling big shoots ([Sun Valley | Stage THIS](#)). The support area has multiple offices/rooms, 4 bathrooms (one with shower), a dedicated makeup suite, green room + VIP green room ([Sun Valley | Stage THIS](#)). It also has a **42-car parking lot** plus additional truck parking ([Sun Valley | Stage THIS](#)), which is a huge plus. This stage is known for music video productions and is accustomed to long booking cycles. *Location Benefits:* Also in Sun Valley (close to Rise studio, actually), in a quiet industrial pocket. Easy access off I-5/170. Lots of space means you could partition an office wing for coworking while still running the stage. *Contact:* This stage is managed by **Stage THIS, LLC**. E-mail info@stagethisla.com or through their site's contact form ([Sun Valley | Stage THIS](#)) ([Sun Valley | Stage THIS](#)). (Since Stage THIS represents multiple locations, specify you're interested in the Sun Valley stage for a long-term arrangement. They can coordinate a tour – possibly with the site manager present. Stage THIS's founder, Jouri Federov, might be the one to speak to.)

5. A Very Good Space – Van Nuys – *Description:* A cutting-edge 12,500 sf soundstage facility with advanced tech. It's fully **pre-lit with RGBw lighting**, configurable for white cyc, green screen, black void, or XR (extended reality) shoots ([A Very Good Space | Los Angeles Soundstage Rental](#)) ([A Very Good Space | Los Angeles Soundstage Rental](#)). They have an LED wall (20'×10') and Unreal Engine system for virtual sets ([A Very Good Space | Los Angeles Soundstage Rental](#)). For coworking, the appeal is that it's spacious and impressive – attracting high-end creatives. Support-wise, AVGS has a few **modular offices and probably a**

mezzanine control room, plus high-speed fiber internet (1 Gbps+) ([A Very Good Space | Los Angeles Soundstage Rental](#)). It's essentially brand new (launched ~2022) with modern amenities (15-ton AC, etc.). *Location Benefits:* Located at **15757 Stagg St, Van Nuys**, in an industrial zone but relatively central in the Valley. It's near the 405 and 101 junction (good for Westside access). Plenty of parking on-site. Being Van Nuys, it's not far from Burbank and NoHo either. *Contact:* **Phone: 747-264-1413, Email: info@averygoodspace.com** ([A Very Good Space | Studio.Guide](#)). The owner/operator is Michael Vezza. They encourage tours – you can likely book one through their website or by calling. (*Note: This is a high-end space; discuss long-term ideas delicately – they may be more used to short bookings, but could consider a tenant.*)

6. Affordable Sound Stages NoHo (Vic's NoHo Lofts) – North Hollywood – *Description:* A multi-stage setup ideal for indie production and coworking. **Location #03 (NoHo Loft #2)** is the main stage: 5,800 sq ft of soundproofed studio with two 40'x40' shooting areas (could be two different sets or one stage + one flex space) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). It has **400 A cam-lock power**, a stage manager on-site, and a ton of amenities included: hair/makeup room, green room, lounge, kitchen, 3 bathrooms (one w/shower) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). Furnishings (sofas, tables) are included and can be rearranged ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). Crucially, they explicitly allow **daily/weekly/monthly/long-term rentals** ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) – they are open to someone using the space as a production HQ. They also have **NoHo Loft #3** across the street (a 1,500 sf furnished loft office) which can serve as production offices or coworking area ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). One could combine Loft #2 and Loft #3 to have a stage and a separate coworking building just steps away. *Location Benefits:* It's in the heart of North Hollywood, near Lankershim Blvd & Sherman Way. There is a **gated parking lot for 30+ cars** on the property ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)), which is rare in NoHo. The NoHo West shopping center is nearby (for lunch options, etc.). Also, the NoHo Arts District and Metro station are a short drive south. This is a very convenient spot for Valley-based filmmakers. *Contact:* **Vic Anthony** (owner/manager). Cell: **(818) 641-0220**; Email: affordablesoundstages@yahoo.com ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)). He is available 24/7 via text/WhatsApp per the listing. Vic can show the stages almost any time – he prides on customer service and lives locally.

7. Mack Sennett Studios – Silver Lake (East Hollywood) – *Description:* A historic studio with two stages and myriad offices. Stage 1 is 5,300 sf with a large 3-wall cyc (53'x34'x21') and full catwalks ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)), plus three green rooms, wardrobe/dressing rooms, production offices, and 1,200 A power distribution ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)) ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los Angeles](#)). Stage 2 is 2,000 sf (35' ceiling) with a cyc and is often used as flex space or events ([Stage 2 at Mack Sennett Studios | Rental Studio Space in Los Angeles](#)). The facility has additional spaces like the **Woodshop** (scene dock) and **Mabel's Bar** (which doubles as an event/coworking lounge). Mack Sennett is known for hosting

events, music video shoots, and even art exhibits – so they are *already configured for a creative community*. *Location Benefits*: 1215 Bates Ave, Los Angeles, CA – right between Hollywood and Downtown in the trendy Silver Lake/Echo Park area. Great for attracting Eastside creatives; lots of cafes around. It's about 5 minutes from Atwater Village, actually. Parking is more limited (street or small lot), but workable. *Contact*: Phone: **(323) 660-8466**; Email: info@macksennettstudios.net ([Contact Us - Mack Sennett Studios](#)). Tours can be arranged via their site or by calling – they often accommodate site scouts. (Ask for the Stage Manager or Events Coordinator. They will want to know your intended use; emphasize you'd rent offices as well, since they have many.)

8. Line 204 “North” Stage – Pacoima – *Description*: A brand new professional stage with extra offices on a studio lot. The specific stage to see is **North Stage #1**, ~6,000 sf, with a 70'×50' 2-wall cyc and 22' grid height ([North 1 - Line 204 | 204 Events](#)). It has **high-capacity power (up to 2400 A)** and is *fully soundproof and air-conditioned*, with massive cooling units for comfort ([North 1 - Line 204 | 204 Events](#)). What makes this interesting is the **attached production office space**: Line 204's campus includes conference rooms and private production offices adjacent to the stages ([North 1 - Line 204 | 204 Events](#)). Everything is on a gated 10-acre lot with security. It's essentially a mini major-studio lot. *Location Benefits*: 12224 Montague St, Pacoima, CA. This is in the North Valley – a bit farther out (about 20–25 minutes north of Hollywood), but right off the 5 freeway. It's in an industrial park, meaning noise and parking are no issue (they have ~80 parking spots available across the site ([North 1 - Line 204 | 204 Events](#))). Being a new facility, it's clean and high-tech. It's also near other production rentals (within a few miles of Fantasy II effects, etc.). *Contact*: **Line 204 Studios – Pacoima**. Phone: **(323) 960-0113** (Line 204 main office) ([CONTACT - Line 204 | 204 Events](#)). Alternatively, email through their website. Ask for info on touring **North Stage 1 in Pacoima**. They might connect you with a stage operations manager (e.g. Mahoob or similar). Since they're a big outfit, explain you're considering a long-term rental – that will get their attention and likely a private tour.

9. L.A. Castle Studios – Burbank – *Description*: A high-end virtual production studio that doubles as office space. The main stage is a fully digital “castle” – they can load virtual sets for talk shows, films, etc., on green screen and LED walls. The facility includes multiple **standing set areas** (talk show desk, etc.) and a plethora of **equipment (cameras, switchers) and crew available** ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). For a coworking hub, the value here is the *all-inclusive nature* – if you were based here, you'd theoretically have access to their gear and tech for projects. They have modern production offices and a stylish client lounge that could serve as coworking space between shoots ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). Basically, it's an example of a **turnkey production incubator**. *Location Benefits*: 154 S. Victory Blvd, Burbank, CA 91502 – centrally in Burbank. It's close to downtown Burbank (restaurants, etc.) and the 5 freeway. The area is very safe. Being in Burbank, it's minutes from all major studios and rental houses. *Contact*: Phone: **(818) 934-3775**; Address as above ([Contact & Locations](#)). You can fill out their contact form on lacastlestudios.com or call – they even advertise studio tour videos ([L.A. & ABQ Castle Studios | Patented Virtual Production](#)). (Speak with CEO Tim Pipher – he's very enthusiastic about the

studio's capabilities. Even if a full-time lease isn't feasible here, the tour will show you cutting-edge setups that could inspire your hub's design.)

10. Example Warehouse Conversion – (Valley Glen candidate) – Description: While not a pre-existing stage, touring an available warehouse could inform your decisions. For instance, the listing at **8115 Lankershim Blvd** (North Hollywood) is a **6,000 sq ft industrial space** at \$1.75/sf ([Warehouses for Lease in North Hollywood, CA - Crexi](#)). Imagine a space like this: an empty high-ceiling warehouse where you could **build a cyclorama**, install soundproofing, and layout open-plan coworking desks in one section. It might have a small office or mezzanine that can be turned into edit bays or a conference room. This particular example likely has a roll-up door and parking lot (details from broker needed). *Why Tour:* Seeing a raw space in Valley Glen/North NoHo will give a sense of the construction work needed and the canvas you'd have if you go this route. It also lets you gauge the neighborhood (noise levels, access, etc.). *Contact:* **Broker on Crexi or LoopNet** – (8115 Lankershim is listed on Crexi ([Warehouses for Lease in North Hollywood, CA - Crexi](#))). The listing agent's info can be obtained via the site (likely a CBRE or Kidder Mathews agent). Alternatively, a broker like **Xavier Tarafa** or **Craig Peters** (who handle studio properties in LA) could arrange a showing of similar warehouses. Discuss with them the requirements (12-18' ceilings, open span, parking) and they can line up a tour of one or two options in Valley Glen/N. Hollywood. This will also help you get real cost estimates for a lease vs. the turnkey options.

Next Steps: I recommend scheduling visits for a mix of the above – some **turnkey studios** (to see how they operate, e.g. Atwater Stages, CML, Affordable NoHo) and at least one **raw space** (to envision a custom build). When touring, talk candidly with the owners about your concept; gauge their interest in a long-term tenant. Many will be intrigued by the idea of a consistent coworking community as opposed to chasing one-day shoot clients. Pay attention to the **lease terms or willingness to contract:** for example, Vic at Affordable might be happy to do a year lease (since he advertises long-term), whereas a place like Mack Sennett might only rent by the day unless you make a special deal. Also, inquire about any **restrictions or additional costs** – e.g. hours of access (24/7 or not), overtime charges, who covers utilities, etc.

In terms of **long-term security**, options like #10 (your own leased warehouse) offer the most control (you'd likely sign a 3-5 year lease and be the master of the space). Options like #6 (Affordable NoHo) or #1 (Atwater Stages) could also be very secure if you negotiate a dedicated usage agreement – those owners are likely to welcome a steady presence. Some others like #9 (LA Castle) or #7 (Mack Sennett) might be less flexible because they have their own production/event agendas – but it never hurts to explore. Landlord interest will vary: look for those who explicitly market to long-term productions (e.g., “*available for monthly/long-term*” ([Affordable Sound Stages - NoHo Lofts - Rentals - North Hollywood](#)) or “*short-term or long-term, we have everything you need*” ([Virtual Productions & Los Angeles Stage Rental | Atwater Stages](#)) as cited). Those are green lights that they'll work with you on a creative tenancy.

By comparing these tours, you'll be able to weigh the **cost vs. benefit** of each location. The ultimate goal is to find the space that **inspires your community** (plenty of creative energy), fits the budget, and offers a stable home where you can grow the hub for years to come. Good luck, and I'm confident one of these options (or a combination) will emerge as the ideal solution for your filmmaker coworking hub!

Got it! I will conduct an in-depth search of stage spaces and film studios across the greater Los Angeles area that match your criteria. I'll look for locations similar in size and layout to Pollution Studios, ensuring they have multiple rooms for coworking and production support. Additionally, I'll investigate pricing across various stages to get a full understanding of the rental landscape.

I'll also explore alternative options such as commercial buildings and large rental houses that could potentially be adapted for your concept. I'll prioritize spaces that already have three-phase power and necessary amenities like makeup/wardrobe rooms and bathrooms, with flexibility for cyclorama build-out if needed. Expect a detailed report with insights on locations, pricing, features, and feasibility soon!

Overview and Criteria for DHAFU Stage Space

The **DHAFU vision** calls for a versatile film/production space similar in scale and utility to Pollution Studios in Los Angeles. Key requirements include a stage of roughly 3,000 sq ft, multiple repurposable rooms (for coworking, offices, editing, etc.), robust infrastructure (three-phase power, high amperage, lighting grid, AC), standard production amenities (makeup/wardrobe rooms, bathrooms, kitchen), and preferably an existing cyclorama (or the ability to install one). Below we explore comparable stage spaces in the greater LA area that meet these criteria, along with their features and costs. We also examine the broader pricing landscape, alternative conversion options (like warehouses or commercial buildings), and potential leasing or ownership opportunities for a long-term DHAFU facility.

Comparable Stage and Studio Spaces in Greater Los Angeles

Several **independent soundstages and studios** around LA offer facilities aligning with the above criteria. These spaces typically have mid-sized stages (~2,000–5,000 sq ft) plus support rooms, cycloramas, and film-friendly infrastructure. Below are notable examples:

- **Pollution Studios (Boyle Heights, LA)** – *Baseline for comparison.* Pollution's main stage is ~2,925 sq ft (65' x 45') ([Studio - Pollution Studios](#)), with a 27' x 18' white cyclorama, a lighting grid (~13–16' height), **600 amps 3-phase power**, air conditioning, and a 10'x9' "elephant door" loading bay ([Studio - Pollution Studios](#)) ([Studio - Pollution Studios](#)). The facility includes **multiple support rooms**: 2 green rooms, a hair/makeup room, wardrobe room, a full kitchen, and a production office ([Studio - Pollution Studios](#)). This one-stop content studio model (stage + offices + rental gear + set shop) exemplifies the DHAFU vision. (*Pricing not publicly listed; likely in the mid-range for similar-sized stages.*)
- **Terminal 8 Studios (Glassell Park/Glendale area)** – A boutique stage space with a **3,000 sq ft floor** and a ~1,650 sq ft cyclorama wall ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)). It's geared for smaller film/photo shoots, but offers multiple rooms: an upstairs glam/fitting room, VIP lounge,

green room, makeup/wardrobe, a **private gym with shower**, editing room, business office, kitchen, and even a bar ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)). Three-phase power is available (sufficient for its included lighting package), and ground-level access facilitates loading ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)). **Rental cost** is about **\$150/hour** (or ~\$1,100 per day) plus a cleaning fee ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)) ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)). This space provides a self-contained mini-studio environment at a relatively affordable rate, making it a strong contender for DHAFU's needs.

([Film Studio & Cyclorama Wall LA, Los Angeles, CA | Production | Peerspace](#)) *Interior of a mid-sized studio with a white cyclorama wall and lighting grid. Many independent stages in LA (e.g. Terminal 8 Studios) offer ~3,000 sq ft of stage space with pre-lit cyc walls and support rooms* ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)) ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)).

- **Rise Motion Picture Studio (Sun Valley)** – A production studio in the San Fernando Valley with a **3,000 ft² sound stage**. It features a **pre-lit 30' x 40' x 14' cyclorama** and a 16' high full lighting grid ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). Being a purpose-built stage, it has ample power (camlock 3-phase tie-ins) and standard amenities (green rooms, etc.). Listed rates are around **\$192/hour** on venue sites ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)) ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)), implying roughly \$1,500+ for an 8-hour day. This stage's size and built-in cyc closely match Pollution's scale.
- **Stray Angel Films Stage (West Los Angeles)** – An equipment rental house turned studio on the Westside (Sawtelle area) with a **soundstage and green screen cyc**. The facility spans 7,000 sq ft overall (including an office suite and gear rental warehouse) ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). The **stage itself is about 1,800 sq ft** (soundproofed) with a lighting grid 14' high, a pre-lit green/white cyc, a green room, and a small production office (~~[Stray Angel Films Westside Sound Stage - Peerspace](#)~~) (~~[Rent Stage Green Screen / White Cyc Soundstage - Stray Angel Films](#)~~). This space targets indie productions and is offered at **\$1,800 per full day** (or \$900 half-day), including a stage manager, basic lights, parking, and green room (~~[Rent Stage Green Screen / White Cyc Soundstage - Stray Angel Films](#)~~). Hourly rates (\$180–\$200/hr) are higher due to its Westside location, but it delivers a turnkey package with gear and crew support – useful for DHAFU if proximity to west LA talent or gear is needed.
- **BLT Studios & Soundstages (Hollywood)** – A “boutique” production facility in central Hollywood (6309 Eleanor Ave) offering four soundstages in the 3,200–5,500 sq ft range ([BLT Studios & Soundstages Los Angeles | Production Facility](#)). Each stage has a

three-wall cyclorama, silent A/C, and comes with **production offices, private green rooms, hair/makeup rooms, lounges, kitchens, and even live stage video feeds and fiber internet** ([BLT Studios & Soundstages Los Angeles | Production Facility](#)). For example, Stage 4 is ~3,240 sq ft and Stage 3 is ~3,750 sq ft ([BLT Studios & Soundstages Los Angeles | Production Facility](#)) – both comparable to Pollution in size. BLT includes **high power capacity** (each stage has substantial 3-phase power and lighting included) and even a small backlot area ([BLT Studios & Soundstages Los Angeles | Production Facility](#)). It markets itself as one of LA's most affordable pro studios, though pricing is typically on request (given the comprehensive amenities). BLT's **all-in-one campus style** (30,000+ sq ft total with multiple stages and offices) ([BLT Studios & Soundstages Los Angeles | Production Facility](#)) ([BLT Studios & Soundstages Los Angeles | Production Facility](#)) could fit DHAFU, especially if scalability or multiple simultaneous shoots are envisioned.

- **Studios 60 (Lincoln Heights/DTLA area)** – A large studio complex with **multiple stages**. They have several mid-sized stages around 3,000 sq ft, such as the *North Stage* (3,000 sq ft vintage brick warehouse style) and a dedicated **Cyc Stage (~3,000+ sq ft)** ([North Stage - Studios 60](#)) ([CYC Stage - Studios 60](#)). Studios 60 provides high industrial ceilings (22+ ft), and their stages come equipped with camlock power tie-ins up to **1200 Amp 3-phase** (with usage billed around \$45/hour for full 1200A service) ([H2O Stage - Studios 60](#)) ([Studios 60 Center Stage 3 Wall CYC Black, White, Green - ShareGrid](#)). Amenities include multiple hair/makeup stations, green rooms, kitchens, lounges, and heavy AC on larger stages ([RAW Stage - Studios 60](#)). For instance, one of their cyc stages has **400A per line (1200A total)** available ([Studios 60 Center Stage 3 Wall CYC Black, White, Green - ShareGrid](#)). **Rental rates** vary: a 3,000 sq ft stage can be around **\$2,000/day** (per ShareGrid info) or hourly on venue platforms (e.g. ~\$200/hr) ([Rent a Studios 60 North Stage, Best Prices - Los Angeles - ShareGrid](#)). Studios 60 offers flexibility to configure space (they boast 12 stages in one 65,000 sq ft facility ([Studios 60 Stages - Los Angeles Warehouse Film & Photo Studio](#))), which might be overkill unless DHAFU plans to host multiple productions; however, renting one stage there or studying their model is useful.
- **Mack Sennett Studios (Silver Lake)** – A historic studio with two main stages (Stage 1: ~5,000–5,300 sq ft, Stage 2: ~2,000–3,000 sq ft) ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los ...](#)) ([Stage 2 at Mack Sennett Studios - Raw / Blank Space in in Los ...](#)). Stage 1 has a large cyclorama (~53'x34'x21') and heavy power (Bates & Cam-Lok connections, 1200A+) ([Stage 1 at Mack Sennett Studios | Photo & Video Production Los ...](#)). Both stages come with attached production offices, dressing rooms, and support spaces (the entire facility is ~25,000 sq ft) ([Mack Sennett Studios | Venue - Los Angeles, CA - Wedding Spot](#)) ([Stage 2 at Mack Sennett Studios - Raw / Blank Space in in Los ...](#)). Mack Sennett is a premium location often used for music videos, commercials, events, etc., so its **rates are higher** (reports suggest ballpark \$3k–\$6k+/day depending on usage). While it meets all technical criteria (soundproofing,

3-phase, cyc, amenities), cost might be a limiting factor for DHAFU unless the budget allows or a long-term lease deal is made.

- **Sidetrack Creative Studios (North Hollywood)** – A smaller creative studio (~1,500–2,000 sq ft stage) positioned as an *“intimate, full-featured space”* for photo/video shoots or casting ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). It has a cyc wall and basic amenities, at an affordable **\$100/hr** range ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). This is on the smaller side of DHAFU's target, but it's an example of a **budget-friendly studio** that still provides a green room and production support on a tight footprint. Similar spaces (like **Sibling Studios**, ~2,000 sq ft stage ([BLT Studios & Soundstages Los Angeles | Production Facility](#))) can be found for ~\$50–\$100/hr. These could be useful if DHAFU ever needed overflow spaces or a network of satellite stages.
- **Arroyo West Studios (Simi Valley)** – A newer facility just outside LA's core but within the 30-mile zone. It offers **two certified soundstages**: Stage A (~5,780 sq ft) and Stage B (~2,700 sq ft) ([Sound Stage A | Arroyo West Studios](#)) ([Sound Stage B | Arroyo West Studios](#)). Stage B, in particular, matches DHAFU's needs: **45' x 60' (2,700 sq ft)** with a 22' grid, **360° wrap-around cyclorama (white/black drapes and 45' green screen)**, 70 tons of silent AC, and very high power capacity (up to 3,750 amps on the grid with numerous 3-phase outlets) ([Sound Stage B | Arroyo West Studios](#)) ([Sound Stage B | Arroyo West Studios](#)). There's an adjacent producer's lounge/office and ample on-site parking ([Sound Stage B | Arroyo West Studios](#)) ([Arroyo West Studios | Los Angeles Soundstages](#)). Arroyo West is a **fully equipped, “producer friendly” campus**, even featuring an advanced motorized lighting hoist system on Stage A ([Sound Stage A | Arroyo West Studios](#)) ([Sound Stage A | Arroyo West Studios](#)). Pricing is not published, but given the state-of-the-art setup, expect rates competitive with high-end Hollywood stages (perhaps ~\$2k–\$3k/day for Stage B). The upside is a ready-to-go professional studio environment; the downside is the distance (Simi Valley might be a longer commute for some LA creators). Still, its **value (more space for cost)** could be attractive if DHAFU prioritizes having a cutting-edge facility and possibly negotiating a long-term lease.

In summary, LA offers a **spectrum of stage facilities** that meet the DHAFU model – from small indie studios in converted warehouses to full-service soundstage complexes. Many of the above spaces have similar dimensions and layouts as Pollution Studios, ensuring compatibility with DHAFU's size needs. All provide three-phase power (often 200A to 1200A+), cycloramas (pre-built or provided), and the requisite breakout rooms for production offices, wardrobe, makeup, etc. The main differences are in **cost, location, and level of included amenities/gear**.

Rental Cost Landscape in Los Angeles

Los Angeles stage rental prices vary widely based on size, location, and amenities. Here's a **broad overview of pricing** to map out the landscape:

- **Small Stages (under ~2,000 sq ft):** Can be found from \$20–\$50/hour in less central areas ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). Affordable spots may run **\$400–\$800 per day** for a basic small stage ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). These typically are bare-bones or photo studios – e.g. a 1000–1500 sq ft cyc soundstage in North Hollywood or East LA with minimal support rooms.
- **Mid-Size Independent Stages (~2,000–5,000 sq ft):** Commonly range from \$100 to \$250 per hour depending on location and features. For example, Terminal 8's 3,000 sq ft stage is ~\$150/hr ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)) ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)); Rise Motion Picture's 3,000 sq ft cyc stage is ~\$192/hr ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)); Stray Angel's 1,800 sq ft stage averages ~\$200/hr or \$1,800/day ([Rent Stage Green Screen / White Cyc Soundstage - Stray Angel Films](#)). Many in this class offer **day rates of \$1,000 to \$2,000** for an ~10-12 hour shoot day (plus extras like cleaning or overtime). This mid-tier is likely DHAFU's sweet spot – balancing professional infrastructure with manageable costs.
- **Large or Premium Stages (5,000+ sq ft or high-end facilities):** These command higher rates, often \$300–\$800+ per hour. For instance, a 5,000+ sq ft Hollywood soundstage with extensive amenities can be \$400–\$500/hr (e.g. one Hollywood stage is listed at \$463/hr on Giggster ([Premier 5,500 Sq. Ft. Production Space with Cyclorama ... - Giggster](#))). Optimist Studios' 15,000 sq ft warehouse stage is around \$850/hr ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). Major studio lots (Warner, Universal, etc., with 10k–18k sq ft soundstages) usually rent by the day or week, easily **\$5,000–\$10,000 per day (or much more)** plus utilities, since they cater to large film/TV productions with union facilities. These are likely beyond the scale needed for DHAFU's current vision, except perhaps for occasional big events.
- **Included vs. Additional Costs:** It's important to note what the base rental includes. **Utilities and equipment** can significantly affect the budget. Some indie stages include basic house power and some lighting/grip in the hourly rate, while others charge separately:
 - **Power:** High amperage tie-ins (cam-lock 3-phase) might incur a surcharge (e.g. \$45/hour for 1200A service at Studios 60) ([H2O Stage - Studios 60](#)) ([Studios 60 Center Stage 3 Wall CYC Black, White, Green - ShareGrid](#)). Small stages with just 200A–400A might include it in the flat rate, but always confirm. If DHAFU

runs a stage, factoring in electricity costs (especially for air conditioning and continuous lighting use) is key.

- *Equipment:* Some venues bundle a basic lighting/grip package (as BLT does – including *studio lighting, basic grip, and 4K monitors* in their rentals ([BLT Studios & Soundstages Los Angeles | Production Facility](#))). Others, like Stray Angel, include a stage manager and some lights in the day rate ([Rent Stage Green Screen / White Cyc Soundstage - Stray Angel Films](#)). If not included, renting lights, cameras, etc. will add to costs (though DHAFU might have its own gear or partnerships).
- *Staff and Services:* Larger studios might require hiring their stage manager or security, and some charge for technical support. Cleaning fees are common (e.g. \$250 cleaning at Terminal 8) ([Film Studio & Cyc Wall LA - Terminal 8 Studios - Event Venue Rental - Tagvenue.com](#)). Overtime typically costs 1.5x–2x the hourly rate if a shoot runs long.
- *Insurance:* Productions will need liability insurance naming the venue – sometimes an extra cost if purchased per shoot.

According to Tagvenue's market data, **\$400–\$500/day is the low end** for small stages, and **\$1,000–\$1,500/day is typical for mid-size soundstages** in LA ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). DHAFU should budget toward the higher end of the mid-range if aiming for a well-equipped ~3,000 sq ft stage with full amenities (roughly \$1.5k/day for short-term rentals, or better, negotiate flat monthly/weekly if using often). There are also **regional cost differences**: Hollywood and Westside locations cost more, whereas stages in the Valley, Downtown, or fringe areas (Alhambra, El Monte, etc.) are more affordable ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). For example, studio zones like **North Hollywood or Burbank** have many budget-friendly options with professional setups ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)), and Downtown/Arts District has versatile warehouses that double as stages.

For DHAFU's long-term planning, if the space will be used regularly, it may be **more economical to lease a space monthly** rather than paying daily rates each time. As a reference, one small stage business (~2,000 sq ft stage) was operating with a building lease of **\$0.90/sq ft per month** (around \$3,150/mo for a 3,500 sq ft facility) ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)) ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)) – far cheaper than renting day-by-day if usage is high. Utilities (power, water, internet) would be on top of that, but even a few shoot days' worth of rental fees could cover an entire month's lease in a modest industrial space. Thus, understanding rental pricing helps illustrate the **cost-benefit of owning or leasing**: if DHAFU plans to facilitate frequent productions, securing a dedicated space could quickly pay off compared to continuous short-term rentals.

Alternative Spaces and Conversion Options

Beyond established studios, DHAFU could consider **non-traditional venues** – e.g. empty commercial buildings, warehouses, or large event spaces – that can be **retrofitted into a stage facility**. This approach might offer cost savings or future expansion potential, albeit with some upfront investment. Key considerations for converting a space include **zoning, infrastructure upgrades, and layout adaptability**.

- **Industrial Warehouses:** Los Angeles has many warehouses in areas like the Arts District, Sun Valley, Gardena, etc., that feature high ceilings and open floor plans ideal for building a stage. For example, a 5,000 sq ft warehouse in South LA was converted into a dance studio with a 3,000 sq ft main room and 2,000 sq ft annex (including a kitchen/lounge) ([ENTIRE 5,000 sq ft Warehouse Dance Studio Space with Kitchen, Stage, and Lounge Area, Los Angeles, CA | Production | Peerspace](#)). This space is used for film shoots and events – essentially functioning as a studio with two large rooms and 23' ceilings. However, it lacked built-in film infrastructure (the listing noted it has a sound system and projector, but relies on natural light and basic electrical service) ([ENTIRE 5,000 sq ft Warehouse Dance Studio Space with Kitchen, Stage, and Lounge Area, Los Angeles, CA | Production | Peerspace](#)) ([ENTIRE 5,000 sq ft Warehouse Dance Studio Space with Kitchen, Stage, and Lounge Area, Los Angeles, CA | Production | Peerspace](#)). The rental rate for that venue is **\$500/hr** (capacity 200 people) ([ENTIRE 5,000 sq ft Warehouse Dance Studio Space with Kitchen, Stage, and Lounge Area, Los Angeles, CA | Production | Peerspace](#)) ([ENTIRE 5,000 sq ft Warehouse Dance Studio Space with Kitchen, Stage, and Lounge Area, Los Angeles, CA | Production | Peerspace](#)) – likely driven by its event use capability. This indicates that **raw warehouses can be monetized** similarly to studios if configured properly.

For DHAFU, renting or purchasing a warehouse and **outfitting it with a cyclorama, power distribution, and rooms** is a viable path. Advantages: potentially lower monthly cost per square foot (industrial rents in less central areas can be \$1–\$2 per sq ft/month or less ([Los Angeles, CA Warehouse for Rent & Lease](#))), and the freedom to design the layout (coworking areas, edit bays, etc.) to the exact vision. For example, a ~6,000 sq ft warehouse could accommodate a ~3,000 sq ft stage plus ~3,000 sq ft of offices, edit suites, and coworking space. Basic upgrades would include installing a lighting grid, adding soundproofing (if needed for filming with sound), subdividing rooms, and ensuring **adequate power** (which may involve working with an electrician to get 3-phase 400A+ service and appropriate breakers/distro boxes). Many older warehouses already have 208V 3-phase lines; it's about confirming amperage and maybe adding cam-lock connectors for easy tie-in.

The **feasibility** of conversion will depend on **permitting** as well – to operate as a film stage, the location might need fire department approval as a certified soundstage or at least assembly space compliance. That said, countless indie studios in LA are

essentially warehouses that have been repurposed under the radar or with minimal change-of-use.

- **Commercial Buildings/Offices:** Another route is taking a large commercial unit (like an old manufacturing space or big-box retail store) and converting it. Some film studios have been created in former supermarkets or warehouses. The benefit is often ample parking and possibly existing office build-outs. The challenge can be ceiling height (you ideally want 14–20' clear for a stage). But if such a building meets the physical criteria, DHAFU could negotiate a favorable lease. **Leasing an empty building long-term** (3-5+ year lease) could allow the **tenant improvements cost to be spread out**, and possibly negotiate some TI allowance from the landlord for things like HVAC or electrical upgrades, especially if the building has been vacant.
- **Large “Rental Houses”:** The term might refer to *equipment rental companies* or other production vendors that have spare space. For instance, some camera or lighting rental houses have stages they rent out (Stray Angel is one example, essentially a rental company with a stage attached). Another example: **Nvisionate Studios** in Burbank is a full-service indie production company with a 7,000 sq ft facility that includes standing sets and a soundstage ([Sound Stage - Nvisionate Studios](#)) – partnering or leasing time from such a place might be an option. Also, companies like Quixote and Line 204 (both equipment and stage providers) sometimes lease out portions of their facilities or older stages. **Line 204 Studios** was expanding in Hollywood (Seward St.) and Pacoima – their older stages or storage warehouses might become available for sub-lease. Engaging with the community of rental houses and smaller studios may uncover **underutilized spaces** that could align with DHAFU's model with minimal modification.
- **Example – Turnkey Small Stage Business:** As a proof of concept, consider the *Affordable Soundstage* case. An independent owner operated a ~3,500 sq ft facility (with a 2,000 sq ft stage) that had all the essential amenities: 200A power, a 12'x12' loading door, parking for 12 cars, AC, offices, kitchen, two bathrooms, wardrobe and makeup rooms, a lounge loft, and even included a pre-lit green screen and blackout curtains to convert the stage ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)) ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)). They had outfitted it with a 1-ton grip & lighting package and a scissor lift ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)) – basically a **ready-to-go mini-studio**. This business was put up for sale with **all assets for \$27,000** (the gear value) and a lease transfer at **\$0.90/sqft** rent ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)). The location (near the 405 freeway in a quiet neighborhood) suggests it was likely in the Valley. This illustrates how a **standard commercial unit** can be turned into a functional studio on a modest budget – and such opportunities do arise. For DHAFU, acquiring an existing small studio (when owners retire or move on) could be a shortcut. In this case, \$27k for equipment and taking over a cheap lease was an incredible value ([Film Sound Stage Business For Sale - Fully Functional and Profitable |](#)

[ProductionHUB](#)) ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)). Keeping an eye on industry listings for similar sales or partnerships might present a chance to assume a space that already has the basics, then further shape it to DHAFU's community-centric vision.

In evaluating alternative spaces, DHAFU should weigh the **trade-offs**: upfront build-out costs and effort vs. the ability to custom-create the ideal environment. A raw space conversion will require investments (cyclorama construction, acoustic treatment, partitioning offices, etc.), but it can be done incrementally. Many DIY studios start with a painted cyc wall and minimal furniture and gradually add amenities. The result could perfectly embody the DHAFU ethos – perhaps a hybrid coworking studio hub – without the premium that turnkey studios charge.

However, one must ensure any chosen building can support **three-phase power and high amperage**. Upgrading a building's electrical service to 3-phase (if not already present) can be costly, so finding a space that already has industrial power is ideal. Also, consider **soundproofing**: warehouses may need additional insulation or sound dampening if recording sound on stage (e.g. adding sound blankets on walls or constructing a room-in-room). Some venues solve this by focusing on content that doesn't require live sound (music videos, stills, etc.), but DHAFU's uses might be broader, so acoustics matter.

Leasing and Ownership Opportunities

To secure a space long-term, DHAFU might explore **leasing with an option to buy or outright purchasing a property** to house the studio. This approach ensures stability and the freedom to develop the facility over time. There are a few angles to consider:

- **Long-term Lease on Existing Studio:** Some independent studios may be open to long-term arrangements. For example, if DHAFU identified a place like Terminal 8 or another small studio where the owner is amenable, they could propose a multi-year lease or management partnership. This could lock in a predictable cost and allow the DHAFU team to brand and modify the space as needed. Not all owners will consider this – many prefer short rentals or to run it themselves – but smaller operations or those looking to step back might. A lease-to-own deal is uncommon in this sphere, but not impossible if an owner is selling.
- **Leasing Industrial/Commercial Space:** As noted, signing a lease on a suitable warehouse or building gives DHAFU control. Look for properties advertised for creative or industrial use in the 5,000–10,000 sq ft range. Often these will list features like existing offices, high ceilings, **3-phase power**, roll-up doors, parking, etc. As a benchmark, a 9,800 sq ft Hollywood soundstage building was on the market with an asking price of \$7.5M ([PowerPoint Presentation](#)); if purchasing is not feasible, an owner like that might consider leasing. Another real listing: **800 Seward Street in Hollywood** (heart of the studio zone) is a 9,794 sq ft building featuring a 6,000 sq ft soundstage (100' x 60', 24' to grid) plus offices, bullpen, hair/makeup and wardrobe rooms

([PowerPoint Presentation](#)). It was for sale at \$7.5 million ([PowerPoint Presentation](#)). While buying it outright is a big investment, a creative approach could be to find an investor to purchase it and then DHAFU leases it with an agreement to potentially buy in the future. The property is already a functioning stage, so it meets all criteria out-of-the-box. Even if that specific one isn't pursued, it shows that **turnkey studio properties** do hit the market (often in the \$5–\$10M range for mid-sized ones in LA).

- **Outright Purchase:** If funding allows, owning a property cements DHAFU's presence and can even become an asset that grows in value (given LA real estate trends and demand for soundstages). In addition to 800 Seward, there may be opportunities in industrial areas slightly farther out (where prices per square foot are lower). For instance, a warehouse in the North Hollywood or Sylmar area might be acquired for a more modest sum and then built into a studio. Keep in mind, purchasing triggers the need for more formal code compliance – for example, to legally operate as a “certified soundstage” you'd engage with fire department inspections, etc. Many smaller studios operate in a gray area without full certification, but as an owner it would be prudent to ensure all safety measures are in place (sprinklers, emergency exits, etc.). The **LAFD has a list of approved studios** and criteria for becoming one ([Certified Studios* | Los Angeles Fire Department](#)), which could be a roadmap if DHAFU establishes its own facility.
- **Hybrid Models:** DHAFU might start with a lease and negotiate a **right of first refusal** or option to buy the property after some time. This gives flexibility – if the venture proves successful, the option can be exercised; if not, they aren't locked into owning real estate. Some landlords might entertain this if they see the tenant improving the property (thus increasing its value).
- **Financial Feasibility:** The decision between leasing vs buying often comes down to capital. Leasing requires deposit and monthly payments (plus build-out costs), whereas buying requires a large upfront investment or loan. However, owning means those monthly payments build equity. If DHAFU has access to investors or grants (perhaps if the project has a community or educational angle), purchasing could be framed as investing in a **creative incubator space** for the long run. There's also the option of buying a property with extra space and **renting out unused portions** to other creatives – offsetting costs. For example, a building with multiple units could house the DHAFU stage and also rent coworking offices to freelancers, or lease a corner to an equipment rental company, etc.

Insight: Given the dynamic growth of streaming and content creation, soundstages in LA are in high demand – larger companies are building new studios, and independent stages stay busy. This means rental rates likely won't drop, and owning a stage facility could become increasingly valuable. If DHAFU's mission is long-term, securing an asset now could position it well in the future. On the other hand, starting with a **leased space (or partnership with an existing studio)** can get the project off the ground quicker and with less risk.

It might be prudent to **approach this in phases**: perhaps initially partner or rent from an existing stage (to build the community and brand), while scouting a permanent home. During that initial period, closely track usage, revenue, and needs – this data will inform what the ideal permanent space requires and what budget is justifiable. Then, pursue the lease/purchase of a building when the concept is proven and perhaps when a great real estate opportunity appears (like a studio for sale or a favorable lease on a unique property).

Feasibility Assessment and Recommendations

Feasibility Summary: Technically, there are plenty of spaces that meet DHAFU's needs. The question will boil down to balancing **cost vs. control**. Renting established stages (like those listed) is straightforward but could be expensive for continuous use. Converting or leasing a space gives more control and potentially lower ongoing costs but requires time and money upfront.

Important factors to consider in determining the best fit:

- *Location:* Proximity to DHAFU's target users (creators, filmmakers) and centrality for crew/talent. A more central location (Hollywood, DTLA, etc.) eases access but costs more; a peripheral location (Valley, Simi) saves money and space but might be less convenient. Tagvenue's analysis suggests looking at NoHo/Burbank or Downtown for **affordable yet professional spaces** ([The 16 Best Sound Stages for Rent in Los Angeles, CA | Tagvenue](#)). Indeed, the examples in Glendale, Sun Valley, and North Hollywood indicate you can get a lot for a moderate price. Pollution Studios itself is in Boyle Heights (east of Downtown) – relatively central but in an industrial pocket that's cost-effective.
- *Size/Layout:* Pollution Studios' ~3k sq ft stage with adjacent rooms is a proven template. All the comparable venues show that ~3k–5k sq ft total *footprint* is sufficient to have a functioning stage + support rooms. If DHAFU anticipates needing coworking space for members beyond just production crews, a slightly larger footprint (say 6k–8k sq ft) might be beneficial so that a dedicated coworking area doesn't conflict with a live shoot. Many of the listed studios squeeze in offices around the stage; DHAFU might want a **clear separation of a quiet workspace vs. the stage area**. This could guide the choice of building (perhaps a two-story building where offices are upstairs, or an L-shaped layout where one wing is offices, one wing is stage).
- *Budget & Operational Model:* If DHAFU will generate revenue through rentals or memberships, mapping out the business model is key. For instance, if renting a stage like Terminal 8 at \$1.1k/day, one might mark it up to clients – but that leaves thin margins. Conversely, if leasing a space for say \$10k/month and then renting it out at market rates (or using it for in-house productions plus offering memberships), the math might be more favorable. **Utilities costs** also come into play – running industrial AC and

high-powered lights can mean electricity bills in the hundreds or thousands per month. Some stage owners pass this on to renters (hourly power fees), but if DHAFU runs its own space, it would absorb that or build it into pricing.

- *Cyclorama Needs:* An existing cyc is preferred. Most listed options have one (white or green). If converting a space, building a cyc wall is relatively straightforward (many companies specialize in this). It's worth noting if multiple colors are needed (some studios keep one wall white, one green, etc., or use repaintable cyc and green screen drops). For flexibility, a **modular cyc or painted backdrop** could be used initially in a raw space, then a permanent cyc constructed when possible. A big advantage of spaces like BLT or Arroyo West is their large, professionally finished cycs that are ready to shoot (and often pre-lit), saving time on every production.

Best Fit Considerations: Based on the research, a few standout scenarios for DHAFU would be:

- **Partnering with a Mid-size Studio** – e.g., renting a stage like **Terminal 8 or Rise Motion** on a semi-permanent basis. These have the right size and multiple rooms. DHAFU could potentially negotiate “down days” for coworking use when not filming, and film use on other days. However, availability might be an issue if those studios have their own clients. This is more of a short-term or interim solution.
- **Leasing a Warehouse in the Arts District or North Hollywood** – and **outfitting it as DHAFU Studios**. This provides creative freedom. For example, a ~5,000–6,000 sq ft warehouse could be split into a ~3k stage (with a new cyc) and ~2k of offices/lounge. Rent might range \$5k–\$10k/month depending on area. Upgrades might cost another \$50k+ (for cyc construction, electrical, AC, cosmetic finishes), which could be spread out. This option means DHAFU truly has its own space to mold and can even host events or community programs in it. It requires strong project management to set up, but aligns perfectly with the vision of a multi-use creative hub.
- **Buying a Property or Business** – If funding is available, acquiring something like the **affordable soundstage business** (or any similar opportunity) gives an immediate operational studio with all pieces in place and at a bargain price ([Film Sound Stage Business For Sale - Fully Functional and Profitable | ProductionHUB](#)). While the specific listing referenced may or may not still be available, the idea is to watch for those. Alternatively, a bigger buy like **800 Seward** is ambitious but would put DHAFU on the map (a Hollywood location with a ready soundstage and offices). For a purchase, assembling investors or grants (perhaps pitching it as a community creative space venture) could be necessary. One could even consider a **cooperative ownership model** if DHAFU has a network of creators who might buy in.

Ultimately, the **best fit** likely balances **cost, control, and community**. A leased industrial space in an up-and-coming creative area might check that balance: for instance, something in the

Downtown LA Arts District or a Burbank media district warehouse – where the cost per square foot is reasonable, the infrastructure can be made film-friendly, and the location is attractive to creatives. This could serve as DHAFU's home where the vision can flourish (with coworking by day, filming by night, workshops on weekends, etc.), and with an eye toward eventual ownership either of that site or a future expansion.

Next Steps: It would be wise to tour some of the mentioned facilities (Pollution, Terminal 8, Rise Motion, etc.) to gather ideas on layout and talk to owners about challenges. Simultaneously, engage a commercial real estate broker experienced in creative spaces to identify current listings that fit the requirements (they may know of warehouses or studios quietly for lease or sale). Running a **detailed cost projection** for at least two scenarios – (1) renting existing stage vs (2) leasing/owning and building out – will quantify the financial landscape. Also, ensure to factor in the ongoing utilities and staffing needs for whichever route.

By compiling this research, DHAFU is equipped with a landscape view of LA stage options and can move toward securing the space that will best serve its creative community, both now and in the future. With careful planning, DHAFU can find a space that not only matches Pollution Studios in capability, but perhaps even sets a new standard by integrating coworking and production in a sustainable, eventually owner-operated model.
